The first part of the paper is devoted to a discussion of the
 general principles of the theory of the structure of the
 crystal lattice. It is shown that the structure of the
 crystal lattice is determined by the nature of the
 chemical bonds between the atoms. The nature of the
 chemical bonds is determined by the electronic structure
 of the atoms. The electronic structure of the atoms is
 determined by the number of electrons and the arrangement
 of the electrons in the atomic orbitals. The arrangement
 of the electrons in the atomic orbitals is determined by
 the Pauli exclusion principle and the Coulomb repulsion
 between the electrons. The Pauli exclusion principle
 states that no two electrons can occupy the same
 quantum state. The Coulomb repulsion between the
 electrons tends to keep the electrons apart. The
 balance between the Pauli exclusion principle and the
 Coulomb repulsion determines the arrangement of the
 electrons in the atomic orbitals. The arrangement of
 the electrons in the atomic orbitals determines the
 nature of the chemical bonds between the atoms. The
 nature of the chemical bonds determines the structure
 of the crystal lattice.

The second part of the paper is devoted to a discussion of the
 specific properties of the crystal lattice. It is shown that
 the specific properties of the crystal lattice are determined
 by the structure of the crystal lattice. The structure of
 the crystal lattice is determined by the nature of the
 chemical bonds between the atoms. The nature of the
